
Objective and evidence checklist

Train-the-Trainer | Bloom's Taxonomy

Use this original planning aid before you build the activity. Intuit TurboTax context; independent portfolio sample.

1. Name the job

What must the learner actually do? If access, policy or process is the obstacle, address that barrier too.

2. Choose the thinking

Recall, explain, use a procedure, inspect relationships, judge against criteria, or develop a new product. The whole task matters more than the verb alone.

3. Write the objective

Given [condition/resources], the learner will [observable action] to [success standard].

4. Choose the evidence

What output or performance will show the same action? Ask for use when the job requires use; ask for a judgment and rationale when the job requires judgment.

5. Review the draft

Check condition, action, standard and aligned evidence. Revise anything a reviewer could not observe. Self-review supports revision; it does not establish verified mastery.

Worked trainer example

Given two fictional teach-back plans and the four-field rubric, judge which is ready to deliver and justify the decision by correctly checking audience, demonstration, learner practice and evidence check.

Evidence: annotated rubric and a short rationale. The rubric asks whether the audience is named, the demonstration models the target action, the practice repeats that action, and the check uses an observable success criterion.

Your draft

Condition: _____

Action: _____

Success standard: _____

Evidence: _____

Concept references: R1 and R2 in the Analysis Guide. Draft for Design review.
